

Liquefied Gas

The shale gas revolution in the US and similar activity in other parts of the world is driving a demand for liquefied gas transportation.

The LNG and LPG tanker fleet is expected to enjoy double digit growth in coming years and there is a demand for innovative technology to deliver improved performance such as low boil-off rates. Callenberg Technology Group delivers low temperature and cryogenic insulation through our wholly owned subsidiary, Ti Marine Contracting.

With a proven track record in an industry where product performance and quality is seen as critical, Ti Marine Contracting provides cutting edge insulation technology which delivers exceptionally low boil off performance, generating significant lifetime savings. A high degree of prefabrication and well coordinated installation management minimizes risk of delays during ship construction.
